O U R M I S S I O N

The name Tankless Done Right says it all. We will install tankless water heaters that will maximize performance and minimize utility usage.

Our customers will enjoy "always hot" water for less money. Our

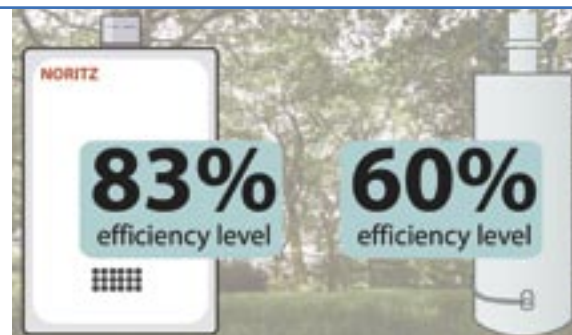

technicians are trained to offer quality service and are considered professionals in tankless applications. We are proud of the fact that tankless water heaters are environmentally friendly and are one of the most efficient ways to heat water when installed correctly. Our aim is to provide the highest quality installation with honesty and integrity. Our goal is to earn your referral and return business. If you want your Tankless Done Right please give us a call.

TANKLESS WATER HEATERS

We want to bring a "little green" in to your home or business. With a Tankless Done Right water heater system you will save on your energy costs and have unlimited hot water. No more running out of hot water while running multiple appliances or taking extended showers. **The water is always hot and always ready.**

Another great feature of a tankless heater is its size. A traditional tank heater takes up 13 square feet of space. **An outdoor mounted tankless heater takes up 0 square feet of in-home space!** We highly recommend outdoor installation.

Noritz tankless water heaters are also a true "green" product. They only burn gas when you need hot water, unlike a conventional heater that runs all day to keep hot water in the tank. **This translates to savings on your energy bill while producing less environment damaging greenhouse gas emissions.** You will see the savings on your gas bill very quickly, in some cases up to 50%!

Noritz tankless water heaters introduced their first tankless water heater in Japan in 1966. Tankless water heaters in the U.S. market have been increasing their popularity and sales over the past several years. This upward trend will continue to grow as more and more people learn about the benefits of going tankless. Tankless water heaters are not the "wave of the future." The future is today. Choose tankless to save money, space, and the environment, and have unlimited water that is **always hot.**

WATER SOFTENERS

Our Professional Series softeners and whole house filters are considered to be the best in the industry.

These salt-free systems will not only **make your skin softer**, they **eliminate hard water scale residue** on shower doors, faucets/fixtures and in toilet bowls.

Tankless Done Right's softener systems are designed to meet all the plumbing codes in Southern California. They are full ported and will not decrease water pressure in your home or business.

A water softener is highly recommended when installing a tankless heater. Please ask us about our free extended warranty package when purchasing a Professional Series water softener with a tankless water heater.

HOT WATER CIRCULATION PUMPS

Southern California water rates have increased substantially! Are your dollars running down the drain?

Tankless Done Right provides a way to save water without raising your electric bill. Our pumps work on demand delivering hot water quickly. No more water is wasted running the shower or sink, waiting for the water to heat up.

Our pumping systems have been approved for 6 points of EPA Energy Star water heating credits. They save on both energy and water. This pump also helps to preserve the warranty on your tankless water heater.

Ask us how to complete your hot water system by adding a Metlund hot water pump to your purchase.

PERMITS

We pull permits! Tankless Done Right believes you should protect your largest investment...your home.

We realize permits take time and money, but isn't your home worth it? We will pull permits and handle all inspections for an additional fee.
